JAVA(Assignment 3)

Github- https://github.com/Abhinav-kr-2807/JAVA

Problem Statement:- Write a menu-driven Java Program to study the concepts of classes, array of objects, instance members, constructors in java.
Assignment description: Create a Student class describing attributes of a student like prn, name, DoB, marks etc. Create an array of objects of Student class and perform operations like: Add students, Display, Search (by prn, by name, by position), Update/Edit and Delete.

Code-

```
import java.util.*;
public class Student {
   public static void main(String[] args)
   {
      student_functions student_functions_object = new student_functions();

      // menu for add, display, search, update, delete
      while(true){
         System.out.println("Select the operation to modify database: ");
         System.out.println("0. Exit");
         System.out.println("1. Add student details");
         System.out.println("2. Display all");
         System.out.println("3. Search student");
         System.out.println("4. Update Details");
         System.out.println("5. Delete record");

         Scanner sc = new Scanner(System.in);
         int choice = sc.nextInt();

         switch(choice){
            case 0:
               System.out.println("Exiting...");
               break;
            case 1:
               student_functions_object.add_student();
               break;
            case 2:
               student_functions_object.display();
```

```
                break;
            case 3:
                student_functions_object.search();
                break;
            case 4:
                student_functions_object.update();
                break;
            case 5:
                student_functions_object.delete();
                break;
            default:
                System.out.println("Invalid choice");
        }
        if(choice==0){
            break;
        }

    }
  }
}
